To whom it may concern

We are a professional health services facility with a waiting room, practitioner rooms, X-ray facility and administration area. This property being a single level building of approximately 600 cu3/m capacity. Ducted reverse cycle air conditioning fitted.

Due to the recent events we became more conscious of the contamination potential in our facility atmosphere. As with any house, business or shopping area the atmosphere is subject to the influence of the people within. Including virus, bacteria and other contaminants. We were most conscious of our clients and staff, health and wellbeing.

Fitting of the Airofresh biological control unit (BCU), was quick, easy and efficient. Just plug it in and the benefit was obvious.

City atmosphere intertwined with main roads is always noticeable with traffic and other odours. The transition was very noticeable and refreshing. Running all day (24/7), you could experience the difference in the office.

Our clients and staff commented frequently and positively, on the presence of this technology. Given the current situation and the winter season upon us. The obvious effect of this technology has given us all peace of mind and a far more relaxed working environment. Not only an excellent requirement for our facility but also, clients, staff and practitioners.

This has been one of the best acquisitions this practice has recently made. Anyone reading this testimonial, we wish you to be safe and in good health.

We very highly recommend Airofresh Intl

Yours sincerely
John Trowse
Chiropractor
