To whom it may concern

Our professional health services facility is situated on a busy main thoroughfare in a near CBD suburb of Adelaide. Consisting of consulting, reception and amenities areas. The property is equivalent to a large house with high ceilings and ducted reverse cycle air conditioning.

Our motivation in consideration of acquiring air purification equipment was to ensure and maintain client confidence and security of wellbeing, within our facility. Not only for the recent CoVid19 events but also generally given the coming influenza season and health considerations generally.

After due consideration we decided to acquire an Aiolfresh Intl biological control unit (BCU). There are no capture and store filters and the technology destroys contaminants.

Since the unit has been installed our staff, clients and practitioners are all commenting on its presence. There is a higher level of confidence and safety along with noticeable atmosphere change for the better. A more relaxed working environment for all.

The process of fitting the unit was easy. It is only a matter of deciding an appropriate placement and plugging it into a standard wall fitting. The air conditioning system circulating the airflow does the rest. We leave the unit operating all day so when the office is closed the process continues to prepare the facility for the next day.

We are satisfied this has been a valuable acquisition and recommend this technology to anyone considering atmosphere control systems. We do appreciate it has no filters to cause us issues in the future.

We very highly recommend Aiolfresh Intl.

Yours sincerely
